

KiwiSaver Performance Survey March Quarter 2013

Markets continue to post very healthy returns, but its product and KiwiSaver provider rationalization that is the talking point this quarter.

Chris Douglas |30-April-13|

Morningstar has released its quarterly KiwiSaver Performance Survey, designed to help New Zealand investors assess the performance of their KiwiSaver superannuation options. The accompanying tables show KiwiSaver fund returns for the one, three, and five years to 31 March 2013.

The first quarter of 2013 was a period of significant change for a number of KiwiSaver providers. AMP Wealth (formerly AXA), National Bank, and ASB's FirstChoice KiwiSaver have all closed to new investors. All the above scheme's will continue to be run in the same fashion they have previously for existing investors, although each Provider has stated these schemes will be either merged into a comparable option, or is under a strategic review.

Further to this, BNZ announced its much anticipated arrival into the KiwiSaver space with the launch of its new scheme. BNZ previously sold AXA's KiwiSaver offering, but has now introduced its own scheme to the market, (with an interesting new advertising jingle that is hard to shake). We expect to add BNZ's KiwiSaver Scheme to our database it in the coming months. There was also the much publicised acquisition of TOWER Investments by Fisher Funds, finalised just after the quarter-end.

For those readers affected by change, we provide some suggestions of what you may want to be thinking about further down in the commentary.

KiwiSaver investors have mostly enjoyed very healthy returns since inception. In fact, no KiwiSaver scheme on the Morningstar database has published a negative return over any of the one-, three-, or five year performance periods published. This is after fees, but before tax.

We hope you find this performance overview helpful, and as always, welcome any feedback you may have.

Market Overview

The growth rally that started mid-way through last year continued into the first quarter of 2013, despite more jitters emanating from Europe. January and February were strong months before markets struggled later in the period. Japan was the star of the show on the back of aggressive expansionary economic policy, but New Zealand equities were also a topperformer gaining a very healthy 8.76% as measured by the NZX 50 Index. International shares also fared well and rose 7.23%.

but unhedged returns were hampered by the rising New Zealand Dollar. Emerging markets and resources did not follow the trend, despite the risk-on environment, and posted mid-to-high single digit negative results.

Both New Zealand and International listed property delivered strong returns, but global property markets (hedged to NZD) stole the show jumping 9.09%. This easily exceeded the return of 6.04% delivered by the NZX Property Index.

Finally, and as expected in a rising sharemarket, fixed interest returns were more lacklustre. New Zealand bonds eked out only a 0.94% gain during the quarter. A mixed outlook on the future direction of interest rates did not help. Global bonds fared better, serving up 1.18%.

Fund Manager Results

The strong returns from sharemarkets resulted in KiwiSaver options with higher exposures to growth assets (shares and property) outperforming those with more invested in income assets (cash and fixed interest) over the March 2013 quarter.

Multi-Sector Growth and Aggressive options were generally the best performers over the three months to 31 March 2013, and KiwiSaver options with greater investments in New Zealand shares were among the best performers.

Over the quarter, top performers were from a mixed bunch. Milford's greater allocation to shares helped to propel their Conservative and Balanced Funds to the top of their categories. Aon KiwiSaver Russell was also a standout performer across the multi-sector categories. While AMP, ANZ and SIL were the other providers deserving mention for consistently strong showings across a number of risk profiles.

Looking out over longer periods is of course a better indicator of a fund manager's performance track record. ANZ and SIL KiwiSaver have consistently been among the best-performing KiwiSaver options over the past three years, across a range of risk profiles. Aon KiwiSaver Russell also deserves mention for its performance in the Conservative and Balanced categories. Fisher

Funds, Fidelity KiwiSaver, and Brook KiwiSaver also performed strongly across the Growth and Aggressive Multi-Sector categories.

Among the single-sector options, the best performer over the five years to 31 March 2013 was **Milford Active Growth KiwiSaver**, which posted a very healthy 13.65% per annum. It was easily the top performing KiwiSaver option over five years.

What Does the Strong Sharemarket Performance Mean?

Investment markets have been on a tear since mid-2012. We have seen the US equity market rally by 17.19% since this time, and some may be surprised to hear that European equity markets are also up significantly since mid-2012 with the composite European indices up 18.08% for the same nine-month period. Australian sharemarkets have also posted very healthy numbers, but New Zealand has been one of the best performing sharemarkets globally with the NZX50 up a cracking 30.09% since 1 July 2012.

Most would agree that such strong performance numbers are unlikely to persist, while many of the debt issues in Europe (and also in the US) are still to play-out, and many economies continue to struggle from high unemployment and subdued growth. So while markets are buoyant at present, and there appears to be good reason why this could continue for the months ahead, don't expect these impressive results to continue at such a high rate.

Some Pointers for those Impacted by KiwiSaver Provider Changes

A sizeable number of KiwiSaver investors will have received letters from their provider around the future of the scheme they have allocated too. As already stated, during the first quarter of 2013 there was a significant amount of change which will impact many KiwiSaver investors. In some cases, the changes are literally a name change. For example, National Bank KiwiSaver investors will continue to have their savings managed in the same identical fashion as previously by the OnePath investment team. This team is responsible for all investment decisions of the ANZ National Bank, and SIL KiwiSaver options,

which are managed in an identical fashion, and have been since inception in 2007.

Investors in the former AXA KiwiSaver scheme (rebadged AMP Wealth following the sale of AXA to AMP) will find they have the same underlying investment team making their asset allocation decisions, given the AXA investment team were brought over as part of the transaction. There are some differences between the asset allocations in the AMP and AXA KiwiSaver schemes, but the investment philosophy and team are consistent.

ASB's FirstChoice KiwiSaver option is a different proposition.

ASB is well known for its low cost passive KiwiSaver Scheme, while the firms lesser known FirstChoice Scheme has used an active approach. It has also provided access to Generation, a global leader in sustainable investment management, via the FC KiwiSaver Scheme's Global Sustainability Fund. All the FirstChoice options are currently under review.

Likewise, TOWER and Fisher Funds have quite differentiated KiwiSaver offerings, so the merged entity will take some time to come together. Fisher Funds Managing Director Carmel Fisher has stated that it will be more of the same for TOWER and Fisher clients in the short-term. You can expect to see some changes from the combined offering over time, but as it stands today, both schemes will be managed under their existing asset allocation framework. However the investment management of both schemes is under the guidance of Fisher's investment team.

Investors don't necessarily have to wait to hear for any decisions, though, and can take these changes as a good excuse to closely scrutinise your KiwiSaver provider and decide if they continue to be the right option for you. The KiwiSaver universe continues to include a diverse range of options. Don't just look at past returns to make an assessment. As we have stated before, also take into account other factors, such as the level of disclosure, customer service, and of course fees. Your risk profile decision, which is the choice between the conservative to growth options is a critical decision. Now is a good time to also seek advice to make sure you are in the most appropriate risk profile. Importantly, you don't need to rush any decision, as

already stated your money will continue to be managed in the same manner for some months to come.

Assets Under Management

KiwiSaver assets on the Morningstar database have grown from NZ\$954.10 million at 30 June 2008 to NZ\$ 14.48 billion at 31 March 2013, a phenomenal growth rate. ASB and OnePath dominate and have 46.3% of KiwiSaver assets between them.

The combination of AMP and AXA moves them into third spot, ahead of Westpac and moving most providers up one spot.

TOWER and Fisher are fifth and seventh respectively, and will comfortably move into fifth place overall when their assets are combined in the next quarterly survey.

The industry remains highly-concentrated: the eight largest KiwiSaver providers account for 95.50% of assets on our database.

About This Survey

This survey groups KiwiSaver options according to their mix of income and growth assets, or their 'asset allocation'. This is one of the most important decisions to make when saving for retirement income. The term 'income assets' refers to cash and fixed interest securities which generally produce stable and reliable returns, but offer little opportunity for long-term capital growth. Returns from 'growth assets' such as property and shares will be erratic – as recent market volatility has demonstrated - but have over time shown greater capacity for increasing in value. The mixture of income and growth assets is the major determinant of potential return and volatility. Investors may notice differences between the returns published in this survey and those they see in other sources. There are several possible reasons for this. Firstly, the returns published here are all after fees, but before tax. Secondly, we take the associated tax credit into consideration when calculating and publishing these returns, while some fund managers base their published performance figures on month-end unit prices only. III

31/03/2012 Total

Morningstar KiwiSaver Survey: 31 March 2013

Please note:

- Past performance is not a guide to future performance. This year's best performers can easily be next year's worst.
- Understanding your risk profile, and the mix of growth and income assets is critical.
- Fees are the one constant that will always eat away at your returns. Take a close look at the cost of your KiwiSaver Scheme.
