# KiwiSaver Survey December Quarter 2014

Investors across all KiwiSaver categories were rewarded in 2014, as both income and growth assets performed positively However, the recent market strength is unlikely to be sustained in the future. Investors should also be wary of chasing performance, and focus on ensuring that they're in the most appropriate risk profile for their personal circumstances.

Tim Murphy | 22-January-15 |

Morningstar's quarterly KiwiSaver Survey is designed to help New Zealand investors assess the performance and other key characteristics of their KiwiSaver superannuation options. The accompanying tables show KiwiSaver fund returns for the one, three and five years to 31 December 2014.

During the quarter there were no new funds added to the database, however the Fidelity KiwiSaver funds were merged into the Grosvenor KiwiSaver scheme. Fidelity Life sold its KiwiSaver scheme to Grosvenor Financial Services in July 2013.

We hope you find this KiwiSaver survey helpful and, as always, welcome any feedback.

## **Market Commentary**

Volatility was a key characteristic of global markets over the last quarter of 2014. The rapid and sudden fall in the price of oil was a major contributor to that. Many investors were caught off guard as the price of crude oil approximately halved to US\$50 amid decreased demand from China and India, greater production in the U.S. and OPEC's decision to maintain production levels. The divergence between the Eurozone and U.S

economies also remained in focus as investors contemplated when rates in the States will begin to rise and what measures may be necessary to solve the bloc's growth and unemployment issues.

In this environment, global markets in aggregate were up just 0.84% in NZ dollar terms. Within this, the US market (S&P 500) was up 4.64%, the UK market (FTSE) fell 4.32% and the Japanese market (Nikkei) slipped 1.55% (rallied 7.90% in Yen).

The NZ dollar strengthened against major trading partners and provided a headwind for market returns if left unhedged. The NZ\$ rose 0.90% to US78¢ from US78¢ and rallied 5.30% to EUR0.64 from EUR0.61. The local dollar also strengthened against the Aussie dollar, rising 7.48% to AUD0.96 from AUD0.89. Naturally, that hurt returns from across the Tasman, with the S&P/ASX 200 falling 3.83% in NZD terms even though it rose 3.11% in local currency.

The local stock market returned an impressive 5.96% during the quarter following the convincing National Party election victory at the end of September. The RBNZ has also indicated that

potential monetary tightening will be pushed out later than originally expected, providing a tailwind for listed companies.

Listed property continued to rally locally and around the globe as investors search for income-producing assets in a world of falling yields. Global listed property rallied 13.04% to cap off an extremely strong year, while domestic listed property also finished the year strongly with a gain of 10.00%.

Bond yields continued to fall around the globe amid growth and inflation worries, thereby resulting in strong returns for bond investors. The global Barclays Aggregate Bond index rose 3.16% in NZ\$ terms and the local composite fixed income index produced a return of 2.96%.

#### **Fund Manager Results**

Investors across all categories were rewarded during the quarter as both income and growth assets exhibited positive performance. As most asset classes registered positive returns there was little disparity between the average returns for the five categories. The growth category was the strongest, posting 3.38%, while the conservative category was the weakest, returning 2.41%.

Generate KiwiSaver and Kiwi Wealth KiwiSaver were the standout performers during the quarter as they led the league tables in the growth categories. Aon KiwiSaver Russell was the strongest performer in the income categories as their allocation to international bond markets helped propel returns. Milford KiwiSaver Conservative continues to be the standout fund in the moderate category.

It is more appropriate to evaluate the performance of a
KiwiSaver scheme by studying its long-term returns. Aon
KiwiSaver Russell is the most notable performer as it is at or
near the top across all five categories. These funds have
historically sat at the higher end of the growth/income split for
each category range thereby benefiting from strong performance
of equities. ANZ KiwiSaver continues to be the strongest of
the default providers across the board, benefiting from greater
exposure to international markets than competitors. Greater

international exposure than peers has also meant **Kiwi Wealth KiwiSaver** has comfortably been the strongest performer in the aggressive category over the past three years.

## **Be Wary of Performance Chasing**

Every performance survey opens with the premise that past performance is no indication of future performance. This is very much the case here and a point we emphasise. Buying an investment when it is running hot and selling when it slumps is a common investing mistake.

Market returns have been extremely strong in recent times across all asset classes. Improving economic conditions, falling interest rates and accommodative monetary policy from central banks around the world have helped propel markets forward. However, these conditions will not last forever. Equity markets have surpassed their pre-GFC highs in many places and some central banks, including the RBNZ and the Federal Reserve, will look to tighten monetary policy in the foreseeable future. As a result, it will likely be difficult for bond and equity managers alike to post returns over the next five years similar to those achieved in the last five

With this in mind, it's easy to see that swapping KiwiSaver providers on the back of five-year performance numbers alone may be a poor decision. Instead, we believe that it's important for investors to first make sure that they are in the most appropriate risk profile (from conservative to aggressive). This decision, which corresponds with asset allocation, is likely to be the key determinant of future performance.

While growth assets (equities and listed property) post more volatile returns, they should offer higher long-term results overall. Investors with a considerable period of time to retirement are typically better suited to be invested in the risky end of the spectrum (in the growth and aggressive profiles) because they are less likely to need to sell their investments at a time when markets are down. Their longer time horizon affords them the ability to hold on through tough times and enjoy subsequent rebounds. Conversely, investors who are in or nearing retirement

are generally better off in less risky profiles (Conservative and Moderate, for example) because a shorter time horizon makes them less able to recover from capital losses. Thus, the active decision to choose an appropriate risk profile can pay off significantly in the long-run.

#### **Assets Under Management**

KiwiSaver assets on the Morningstar database grew to NZ\$25.23 billion at 31 December 2014 from NZ\$954.10 million at 30 June 2008, which is a phenomenal growth rate. ANZ and ASB remained the dominant players at 31 December 2014, with a steady 43.8% of KiwiSaver assets between them. AMP retained third spot ahead of Westpac, while Fisher Funds remained in fifth spot.

The industry remains highly-concentrated, with the eight largest KiwiSaver providers accounting for 94.50% of assets on our database.

#### **About This Survey**

This survey groups KiwiSaver options according to their mix of income and growth assets, or "asset allocation". This is one of the most important decisions to make when saving for retirement. The term "income assets" refers to cash and fixed interest securities that generally produce stable and reliable returns but offer little opportunity for long-term capital growth. Returns from "growth assets" such as property and shares will be erratic — as recent market volatility has demonstrated — but over time have shown greater capacity for increasing in value. The mixture of income and growth assets is the major determinant of potential return and volatility.

Investors may notice differences between the returns published in this survey and those they see elsewhere. There are several possible reasons for this. First, the returns published here are all after fees but before tax. Second, we take the associated tax credit into consideration when calculating and publishing these returns, while some fund managers base their published performance figures on month-end unit prices only.

# Morningstar KiwiSaver Report: 31 December 2014

Please note:

- Past performance is not a guide to future performance. This year's best performers can easily be next year's worst.
- Understanding your risk profile, and the mix of growth and income assets is critical.
- Fees are the one constant that will always eat away at your returns. Take a close look at the cost of your KiwiSaver Scheme.

To obtain advice to the subsidiaries of Australian products) before making any decision to invest. Neither Morningstar's subsidiaries, nor Morningstar's exployees can provide vou with neirsonalised financial advice. To obtain advice to the subsidiaries of Australian products and the subsidia Financial Services Guide (FSG) for more information www.morningstar.com.au/fsg.asp Returns are before tax and after fees. The performance for ASB, AMP, Forsyth Barr and Tower reflects fees that are charged as a percentage of your account balance and paid by cancelling units. Please contact Morningstar if you require clarification. Morningstar requested a (Total Expense Ratio) TER to be provided and calculated by Providers in line with the IOSCO international standard calculation, excluding dollar-based account fees. The dollar-based account or membership fees are payable in addition to the other fees captured in the TER, and are not reflected in the fund's performance. Und. = Undisclosed.\* - Performance numbers supplied directly from the provider rather than calculated independently by Morningstar.\*\* - Median rather than a mean. \*\*\* - Minimum fee up to \$40,50 depending on option is charged, inclusive of other costs. \*\*\*\* - \$40 fee but \$0 if balance is over \$5,000.
